

CASE STUDY

KINGS CROSS SQUARE, LONDON

‘ This award-winning project from 2015 is not only aesthetically impressive, but reduced energy consumption with long life LEDs. ’

BACKGROUND

In the redevelopment of King's Cross Square, the station's new entrance, StudioFRACTAL were commissioned to create a new lighting scheme.

REQUIREMENT

The project is the first large scale public realm project in the UK to use only LED technology and Kemps were specified to provide both standard and bespoke LED luminaires for the project.

Kemps were also specified to provide luminaires for the newly improved, low energy LED lighting for the famous clock at the top of the building's façade.

Products used in this project:

Standard and bespoke LED luminaires

RESULTS

The result is visually stunning, and has made an incredible impact on the building and the way people use the space. Using the building's imposing stature as a backdrop, the design was based on the idea of maximising views of the recently revealed, now illuminated, grade 1 listed building.

The project is not only aesthetically impressive, it also maximises the reduced energy consumption and longer life span synonymous with LED lighting solutions.

This project won the Exterior Lighting Project of the Year at the Lighting Design Awards, 2015. StudioFRACTAL won the Award of Excellence at the International Association of Lighting Designers (IALD) Awards, 2015
